

THE ART OF TRANSFORMING TOMORROW: A NEW RENAISSANCE

From Blue Marble to Earth-2: ANew Terraforming

Cosimo Accoto
Tech Philosopher | Research Affiliate & Fellow (MIT) |
Adjunct Professor (UNIMORE) | Startup Advisor & Instructor

a philosopher surrounded by engineers

renaissance is a new terraforming

we need a new cultural and strategical map

The (New) Fantastic 4

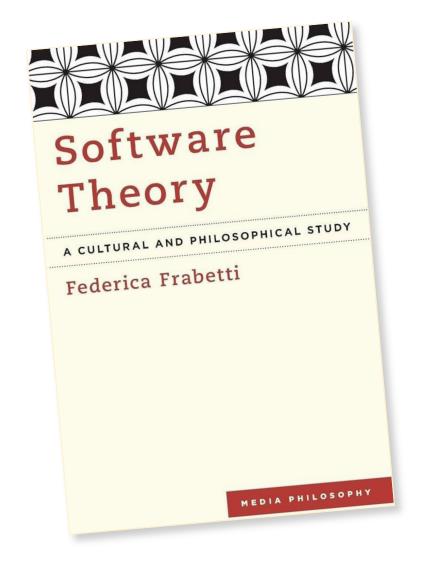

- Computation
- Automation
- Anticipation
- Simulation

Computation software as a new world-building language

"Jeff's point was that Amazon was just as much a software company as Microsoft or Oracle or Adobe. It just happened that instead of being the product that we shipped to consumers, our software ran behind the scenes, allowing us to ship brown boxes with books or music or just about anything to someone's doorstep. Our business is not what's in the brown boxes," he said. "It's the software that sends the brown boxes on their way".

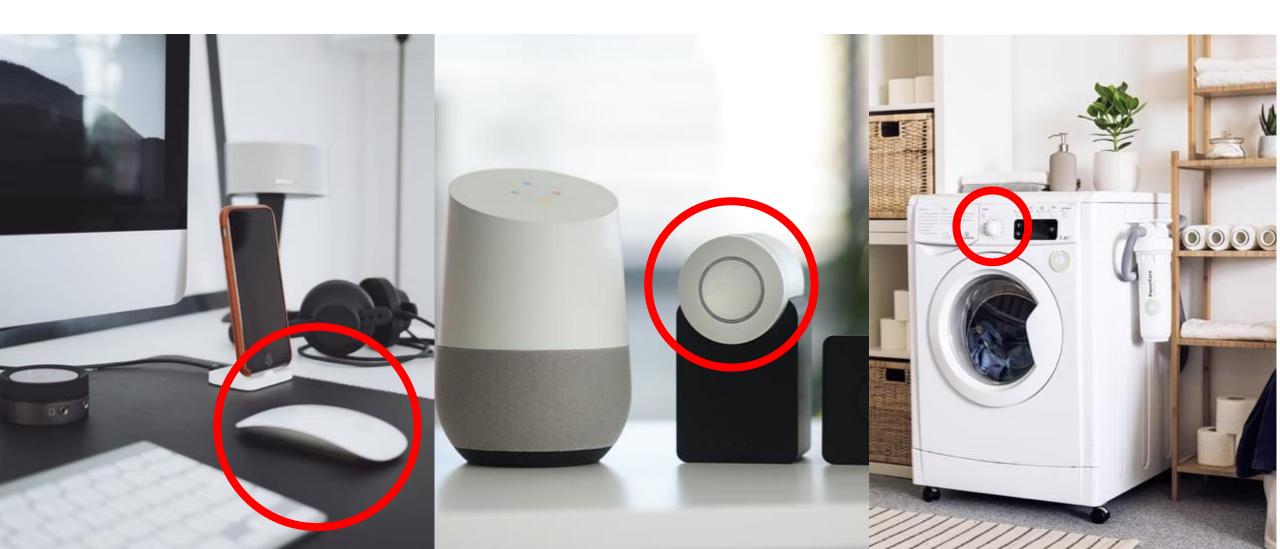

Software code designs, decides and deploys the conditions of possibilities of/on Earth-2

From media to money, software code is becoming the invisible engine of the existence, experience and intelligence of our digital planet

Automation a new ecology of data, platforms, machines

software society + sensor society

Automation is a mindset, not a skillset. It's a strategy (from *autonomous agents* to *smart contracts*)

It's not only a machine (working), but a machinery (organizing). It refers to programs/algorithms as well as to protocols/platforms (dogs too)

Understanding the Blockchain Economy

An Introduction to Institutional Cryptoeconomics

> Chris Berg Sinclair Davidson Jason Potts

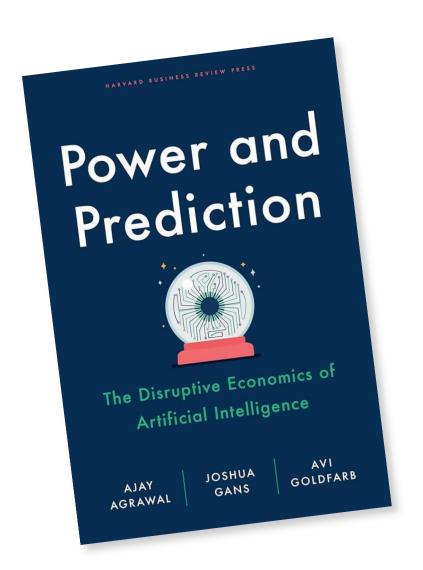

Blockchain-like technology is an institutional innovation, not just a technological innovation

It's more like the "division of labor" type of innovation (Adam Smith) than a new pure tech innovation

Anticipation from the archival age to the oracular era

The production of prediction is the business of the future

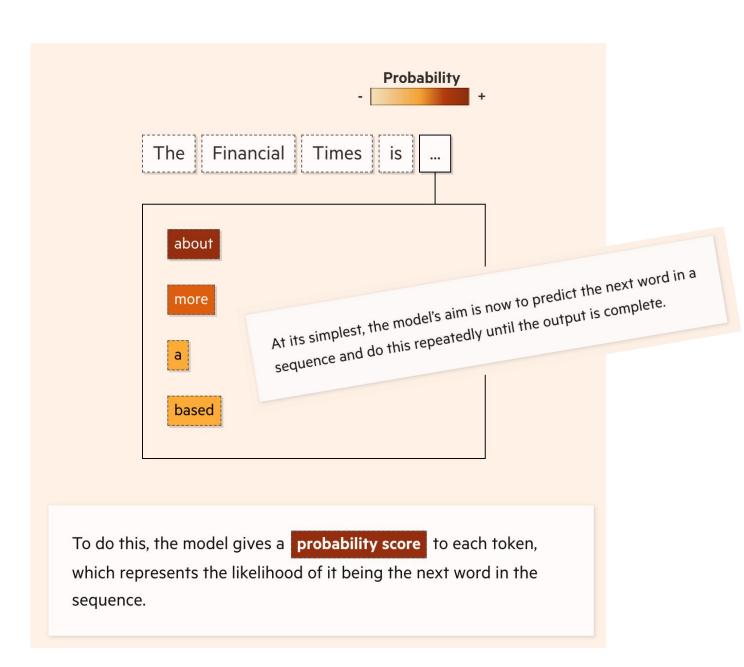

Moving from *archive* (feedback economy) to *oracle* (feedforward economy)

Simulation generative artificial intelligence: words & worlds

An LLM is a text predictor ... a computational simulation of human language

CALCULATED SURPRISES

A PHILOSOPHY OF COMPUTER SIMULATION

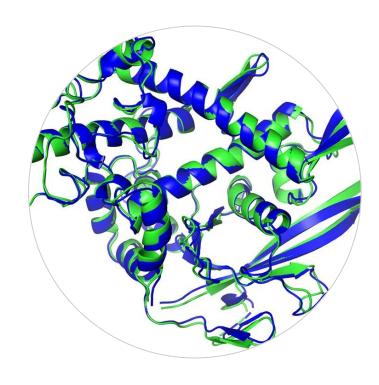

JOHANNES LENHARD

Computational simulation is an epistemological revolution

From automated languages to synthetic images, from digital twins to extended realities ...

We live by simulations, now

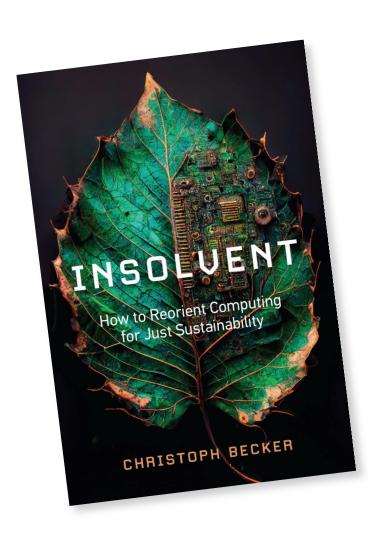

Computational simulations: from words to worlds

protein folding (micro)

planet twinning (macro)

My Key Takeways

- ✓ Build (Your) Strategic Map for the Earth-2
- ✓ Embrace and Execute the (New) Fantastic 4
- With Great Power comes Great (Planetary) Responsibilities

thanks
